

The Cottages

Assisted Living & Memory Care

Statement to Hospitals

The Cottages is excited to announce that we have implemented a BounceBack Prevention Program that is aimed at increasing the overall health and well-being of the residents of The Cottages as well as reducing hospital readmissions.

Our program started out by putting together a focus group consisting of our Director of Excellence, CMO and three of our outstanding Administrators.

From our focus group we designed and implemented a customized BounceBack electronic tracking system with built in medical alerts that help monitor our resident's progress and condition.

What you can expect from our program is:

- Weekly checkups by our RN
- A person-centered approach that involves a collaborative effort between our community health providers and The Cottages which begins on day of discharge and continues throughout the 30-day readmission window and thereafter
- Daily monitoring of critical vitals based on diagnosis
- Nutrition and fluid monitoring
- Knowledge of BounceBack penalties and diagnosis
- Continuing to be a preferred partner who understands the needs of our residents and healthcare providers
